

App Layout

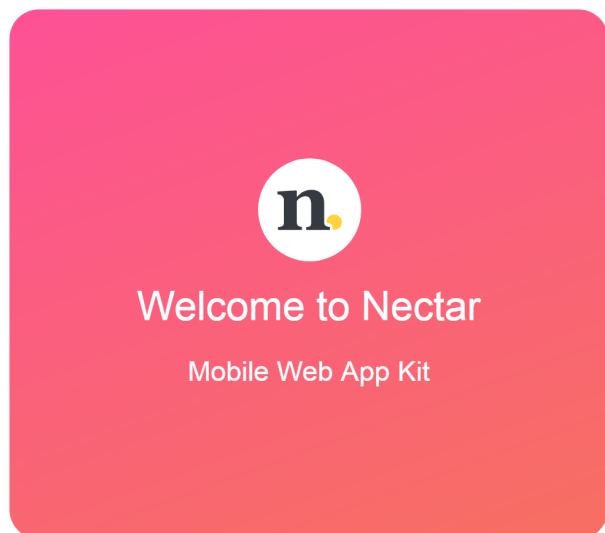

As Nectar has Single Page Application (SPA) architecture, the app shell layout is defined inside `index.html`

Navigation Layouts

Nectar supports two main navigation layouts widely used in apps — Hamburger and Tab Bar.

Hamburger Layout

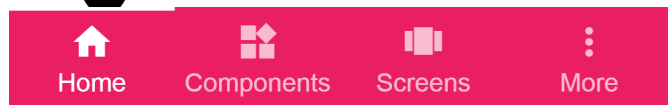

Based on Framework7

Nectar is built on the top of Framework7 — a fully-featured HTML mobile framework to develop apps with native Android & iOS look and feel.

Platform-agnostic UI/UX

Provide your users the best experience

Tab Bar Layout

Setting up Hamburger Layout

By default, Hamburger layout is set up for Nectar.

1. Open `/assets/custom/js/config.js` file.
2. Inside `window.config.theme = { set navigation: 'hamburger'`
3. Open `index.html` file.

4. Uncomment HTML inside `<!-- Hamburger Navigation -->`

5. Comment HTML inside `<!-- Tab Bar Navigation -->`

Setting up Tab Bar Layout

1. Open `/assets/custom/js/config.js` file.

2. Inside `window.config.theme = { set navigation: 'tabbar'`

3. Open `index.html` file.

4. Uncomment HTML inside `<!-- Tab Bar Navigation -->`

5. Comment HTML inside `<!-- Hamburger Navigation -->`

 You can use only one type of navigation layout at a time, either Hamburger or Tab Bar.

Push State (#!) does not work for Tab Bar Layout.
